

# ELEMENTOR – PAGE BUILDER

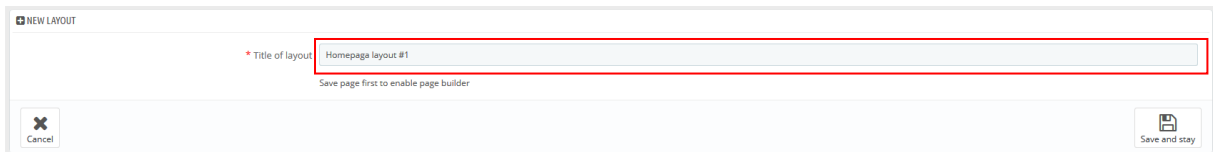

This module comes with Powerful Homepage Elementor - Page Builder, where you can create home layouts with drag and drop feature.

You can configure module from module list or directly navigate from back-office **Design > Elementor – Page builder**.

- You Can Click Add New Layout.

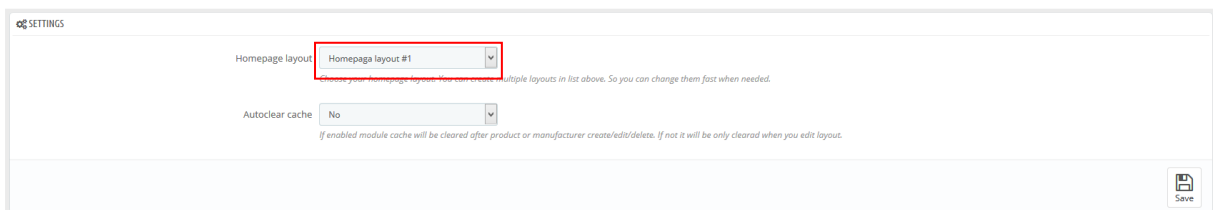

- Screenshot of New Layout Configure.

You can click the Add New Button then after Add the Title of Layout Name.

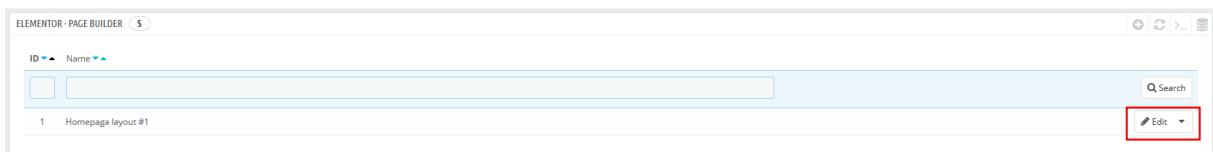

- Screenshot of Homepage Layout Settings.

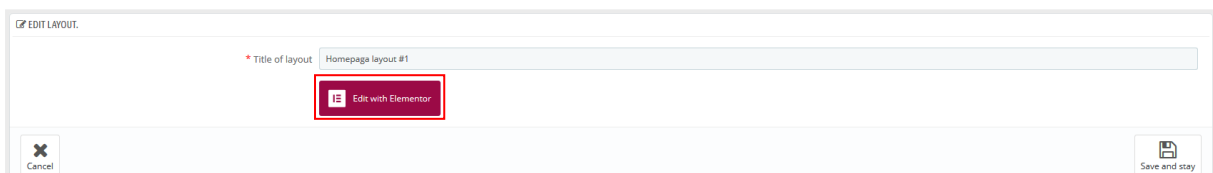

- **Homepage Layout:** You Can Choose your homepage layout. You can create multiple layouts in list above. So you can change them fast when needed.

- **Autoclear cache :** If enabled module cache will be cleared after product or manufacturer create/edit/delete. If not it will be only cleared when you edit layout.

- Edit The Homepage Layout.

- You Can Edit With Elementor Page Builder

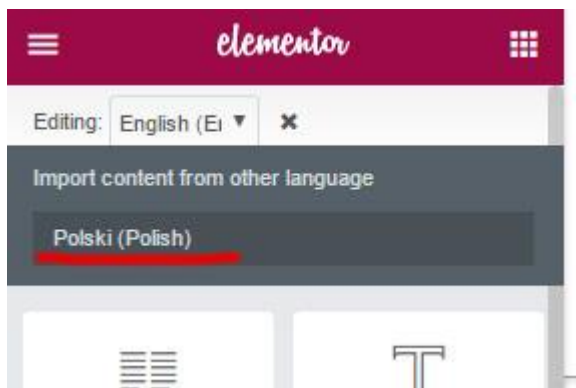

## Languages

You need to create content in elementor builder for each language you use in your shop. Language which you currently edit is highlighted at top.

Once you create your page, you can switch to another language and to speed up the process you can import content from previously created by click on 1.

## Template manager

In library you can save your layouts, so you can use them later in other pages. You can also export/import templates to .json files.
