# BIT – MEGAMENU

Building a Mega Menu on Prestashop will be faster and easier than ever with BIT - Megamenu module. Build Prestashop mega menu using drag & drop in back office.

You can create Horizontal and Vertical menu. You can also set colors and font option in menu settings from TD - Theme Settings.

Vertical menu can be positioned on horizontal menu or on left column. You can also disable vertical menu by selecting Hidden.

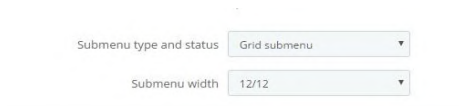

- Add Menu Item

Click the Plus Icon to add menu item.

Then you have to fill basic information like tab title, tab url, you can use optional icons, etc.

- Submenu type

With grid submenu you will be able to create columns and row inside dropdown, if you choose predefined tabs then you will be able to select from created tabs inside "predefined tabs" section to get tabbed menu. You can also select hidden, then tab will not have a dropdown.

You can define submenu width, 12/12 width mean submenu will fill entire available width. 6/12 will fill 50% etc.

Example 1:

If you want have a simple menu, just with one column, then select 4/12 width as submenu, and then set 12/12 width to created columns
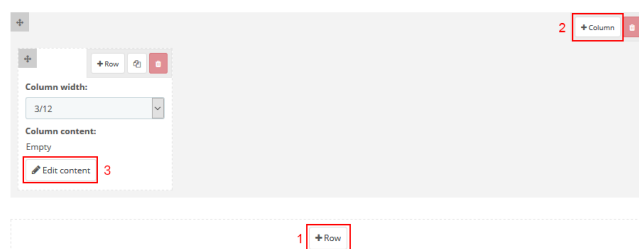

Example 2:

For predefined tabs we recommend 12/12 width of submenu

Example 3:

If you want advanced menu select 12/12 width, and then give own width to columns Drag & Drop grid builder

To created drag & drop submenu, select grid submenu and then:
1. Add Row,
2. Add Column,
3. Set content for column

You can drag & drop columns and row by cross icon

For each column in submenu you can assign content and define own style

You can also set custom style for entire submenu of individual tab by clicking expand submenu optional design options. You will be able to defined then own background. Colors and borders of submenu.

- Predefined submenu tabs

You create them as normal tabs, in "Predefined tabs section".

Then you will be able to choose them as tabs inside submenu.

- Custom links and custom html

You can create custom links or custom html content, which you will be able to choose as content inside submenu column.
